

Environment Policy

Being an ecologically and socially responsible leader in the glass fibre market is a pre-condition for 3B-Fibreglass to be successful in the long term. We work every day to meet our commitments to the community regarding climate, environment and resource consumption to continuously reduce the material footprint of our products.

As a company we are committed to:

- reducing our Scope 1, 2 and 3 Greenhouse Gas (GHG) emissions per kg of glass produced. 3B will further improve operational efficiency as well as energy efficiency and implement systematic overall energy reduction programmes. Step by step we will raise the bar on furnace electrification, while striving for 100% green electricity;
- partnering with our suppliers to minimise impact of raw materials. Optimising our transport and logistics solutions with both our suppliers and customers;
- further reducing our waste, aiming at Zero-Glass-to-Landfill, always applying the waste hierarchy pyramid (Reduce, Reuse, Recycle, Recover, Dispose). We will provide our expertise to support meaningful circular economy initiatives, developing relevant partnerships to reduce environmental impacts of the composite products' life cycle and particularly composites end-of-life;
- regularly reviewing our environmental impacts, always limiting our emissions and pollution, applying the precautionary principle and maintaining a continuous dialogue with the community;
- continuously improving our Environmental Management Systems and always complying with all applicable regulatory standards and legislations.

As a company, we want to develop **a strong collective green mind-set, inspiring each 3B employee** into:

- being constantly alert to the impact of their daily actions and decisions on the environmental footprint of the company;
- making all necessary efforts to avoid or reduce waste creation, ensure careful waste sorting and management, and to always use resources in a responsible way, according to company objectives;
- implementing improvement actions whenever possible and taking an active part in environmental impact reviews.

10 June 2023
Ludovic PIRAUX, CEO
